

MOTOR GUARD

APPLICATOR GUNS

NEW FROM MOTOR GUARD

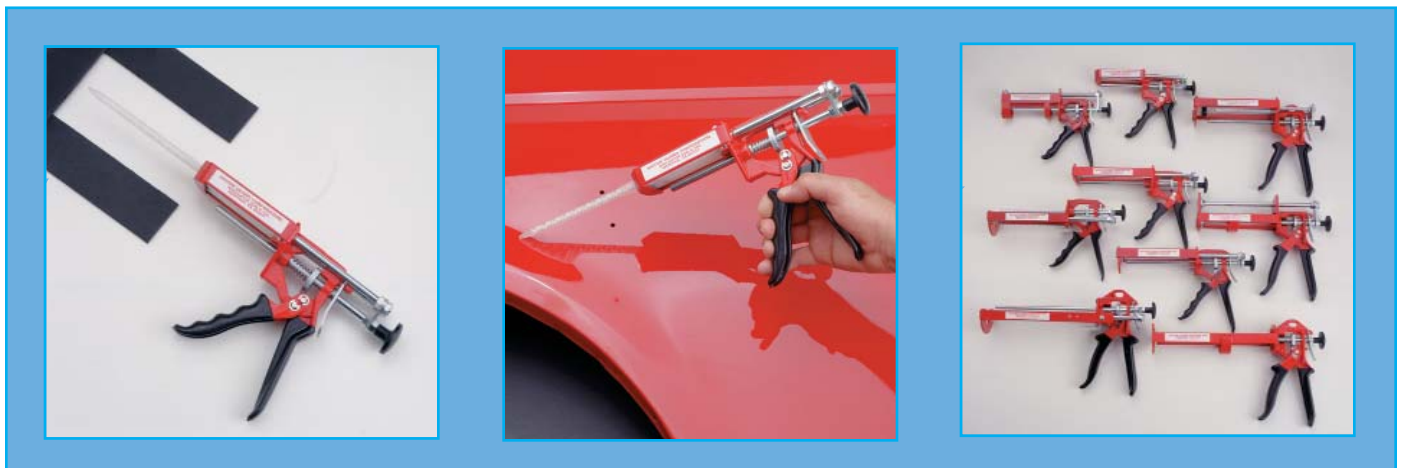

MOTOR GUARD IS PLEASED TO INTRODUCE THE
LATEST IN ITS UNIQUE TOOL COLLECTION,

APPLICATOR GUNS!

This unique collection of guns will accommodate virtually any cartridge available today. The design is compatible with all caulking, adhesive or seam-sealing applications. The guns are ergonomically designed and come with molded hand grips for more operator comfort and less fatigue. The construction is heavy-duty cast aluminum, with rugged welded steel supports and slides.

These rugged guns produce a higher power ratio than most available models, resulting in a high mechanical advantage for maximum thrusting force. The cartridge supports are designed to eliminate the breakage associated with some light weight models, and heavy duty push rods eliminate distortion problems under pressure.

These are the Applicator Guns designed for professional performance, and are manufactured to the highest quality standards. Users of these tools report reduced completion times with far superior results over existing models and methods.
