

MOTOR GUARD

THE DUST DOCTOR®

NEW FROM MOTOR GUARD

SANDING BLOCK CLEANING TOOL - MODEL DD-2

INSTANTLY INCREASES SANDING PRODUCTIVITY

PATENT PENDING

The All New **DUST DOCTOR®** from **Motor Guard** revolutionizes hand sanding by providing an instant means of cleaning loaded abrasive sheets. A quick pass on this unique tool leaves loaded paper as clean as new. By dramatically reducing material costs as well as cutting down on the time spent changing paper, the cost savings are immediate.

This unique tool utilizes microfiber technology to pull sanding dust right from the paper. A magnetic backing allows placement of the tool next to the work area for maximum productivity while a soft, cushion inner layer enhances dust collection by ensuring full contact with the sanding block.

THE DUST DOCTOR® IN ACTION

The **DUST DOCTOR®** provides the added benefit of improving shop air quality and cutting down on cleanup time.

The Motor Guard **DUST DOCTOR®** is the latest addition to a full line of refinishing products.

From Pulling to Painting, **Motor Guard Corporation** has a product for all of your autobody repair and refinishing needs.

Exclusive Features:

- Microfiber Outer Layer Traps Sanding Dust
- Soft Cushion Inner Layer Enhances Dust Collection
- Flexible Magnetic Backing Allows Pad Placement on the Body Panel or a Cart
- Improves Shop Air Quality by Reducing Airborne Dust

THE DUST DOCTOR®

INSTRUCTIONS FOR USE

IMPORTANT SAFETY INSTRUCTIONS:

WARNING

As with all sanding operations, proper breathing and eye protection should be worn at all times.

INSTRUCTIONS FOR USE:

The **Dust Doctor**® works best on 400 grit and finer abrasives and has been optimized for finer sanding at the primer stage required for today's superior final finishes, particularly waterborne systems.

During these operations, sanding dust accumulates quickly and loads the abrasive sheet; lowering productivity and increasing material expense.

Until now, common methods of cleaning loaded paper have proven less than effective while contaminating the shop air with fine dust.

For instant, dust free unloading with the **Dust Doctor**®, follow this procedure:

Place the loaded sanding block against the microfiber pad using a moderately firm, even pressure. Move the block side to side in a slight wiggling motion while, at the same time, twisting the block. Quickly pull the block away from the pad while twisting.

Do not drag the paper across the pad; transferring dust is a simple, one-step process. Once this technique is perfected, unloading paper is a snap.

CLEANING THE TOOL:

The **Dust Doctor**® is quickly cleaned with a shop vacuum. A short nozzle, dragged across the pad, will remove all residual sanding dust. If cleaned with water, the pad should be thoroughly dried before use.

PLACE BLOCK ON DUST DOCTOR AND WIGGLE BACK AND FORTH

PULL AWAY WHILE TWISTING
